

psyc_services2020

Version: 1.0 (April 4, 2024)

This document is available at Open Science Framework (OSF) (<https://osf.io/dspgq>). If you have any questions or suggestions, or you identify a mistake in our documentation or code, please contact us at lml@clin.au.dk and/or opr@clin.au.dk.

The dataset `psyc_services2020` contains information on all health services delivered by private practicing psychiatrists financed by the public/national health insurance between January 1, 1990, and December 31, 2020, for all individuals living in Denmark during that period. There is one observation for each health service, including the type of psychiatrist, the type of service, and the number of the health service(s) provided.

Code: `psyc_services2020.R` (R code)
 Output: `psyc_services2020.RData` (R file)
 `psyc_services2020.dta` (Stata file)
 `psyc_services2020.csv` (CSV file)

The dataset is created based on the following registers:

- Register `population1986_2021`, which includes basic information on all individuals living in Denmark between January 1, 1986, and December 31, 2021. We have created this dataset based on the registers from [Statistics Denmark \(DST\)](#) on population ([‘Befolkning’; BEF](#)) and deaths in Denmark ([‘Døde i Danmark’; DOD](#)). Specific details and R code are available on OSF (<https://osf.io/dspgq>).
- The Danish National Health Service Register,¹ which contains information on health services delivered in primary health care by health professionals (e.g., doctors, physiotherapists, and chiropractors) supported by the public/national health

insurance since 1990. Until 1996, services provided to children aged less than 16 years were reported using the personal identification number of the mother or father. The register is available through the [Danish Health Data Authority \(Sundhedsdatastyrelsen; SDS\)](#) using [Sygeskringsregisteret \(SSR\)](#) or through [Statistics Denmark \(DST\)](#) health service database ('[Sygeskringsstatistik](#)') with the datasets `sysi` from 1990 to 2005 and the datasets `sssy` from 2006 to 2020.

Dataset `psyc_services2020` contains all health services delivered by private practicing psychiatrists financed by the public/national health insurance, classified as either delivered by adult psychiatrists (specialty code 24), child psychiatrists (specialty code 26), or community psychiatrists (specialty code 35).

The final dataset contains 11,104,087 observations from 519,097 unique identifiers with the following variables:

- **pnr:** Unique personal identifier. All individuals born or immigrating to Denmark receive a unique personal registration number (CPR number) containing 10 digits. Based on different digits' positions, the CPR number contains information on the date of birth and sex. The [PNR number](#) is a de-identified version of the CPR number made by DST that does not include personal information but allows linkage between different registers based on this unique identifier.
- **sex:** Sex based on DST's variable [koen](#) (1: male; 2: female), indicating the legal sex of the individual based on information from the CPR number.
- **birth_d:** Date of birth based on DST's variable [foed_dag](#).
- **type_prof:** Type of health professional (24: adult psychiatrist; 26: child psychiatrist; 35: community psychiatrist) based on DST's variable [speciale](#).
- **type_service:** Type of service provided using the original categorization from DST's variable [speciale](#).
- **no_services:** Number of the health service(s) provided based on DST's variable [ydlant](#).
- **year:** The year of the provision of the health service(s) based on DST's variable [honuge](#).
- **week:** The week number within the year of the provision of the health service(s) based on DST's variable [honuge](#).
- **date:** Approximate date of the provision of the health service(s), using the first day of the registered week based on DST's variable [honuge](#).
- **register:** The original register from DST (`sysi` for 1990-2005 and `sssy` for 2006-2020).
